

# OHB TAIL LIFT

Access XL (Ross and Bonnyman) Overhead Beam Tail Lifts are built to meet individual specifications. As one of the most versatile tail lifts on the market, they are most commonly used for trailers with double doors but are equally suitable for shutter applications.

OHB Tail Lifts are highly practical within dairy and grocery industries vehicles, with regular cleaning of the vehicle interior being required. Overhead Beam Tail Lifts are also commonly used in loading bay situations to overcome the problem where the dock is higher than the vehicle floor height.
