HF90140 – 500 INBOARD LIFT

“500Kg SWL”

TECHNICAL FEATURES

- | | |
|----------------------------|-----------|
| • Maximum capacity | 500kg |
| • Overall weight | 160kg |
| • Power | 12v / 24v |
| • Speed up (full charge) | 5m/min |
| • Speed down (full charge) | 4m/min |

SAFETY DEVICES

- Battery isolation master switch
- manual pump in case of emergency
- Automatic roll-off flap to halt wheelchair travel forward
- Automatic roll-off flap/bridge plate to halt wheelchair travel whilst vertically travelling

Our new inboard, horizontal fold lift differs from our standard range of double arm lifts thanks to its maximum load capacity of up to 500 KG. The structure of the double arm lift is made of special high tensile steel, which guarantees a higher lifting capacity without substantially increasing the weight of the lift. The new lift offers the same performance as other double arm lifts in terms of technical features, safety and reliability; with a lifting capacity of 500 KG. The GRP grating load platform is certified non-slip in accordance with DIN 51130-R73. Furthermore, this special patented grating material gives the loading platform a high mechanical resistance.
